Purpose of Contact: Sample Point Relocation for the North Firing Range

Discussion

The line of sample points that are biased for the base of the south face of the north berm are located approximately 33 feet south of the berm. These sample points will be moved so that these are located at the base of the south face of the north berm, adjacent to the slab. A separate contact record will be generated for the additional sample relocations that may be required based on these changes.

Because of the impending slab removal, sample collection will proceed immediately. The full 6" depth sample will be collected at these locations.
